

High Quality Professional Broadcast Monitors

2015

It's all about one single, simple concept: Customer Service.

Thirty-five years ago our organization, starting out as a simple contract broadcast equipment design group, had one vision: to offer the best customer service in the business. We began by manufacturing a number of on screen display products. As our manufacturing volumes grew, so grew our reputation for servicing our customers.

We have always believed that listening to our customer's specific needs was the best way to develop any product. At the 1995 National Association of Broadcasters Show, after significant user feedback, we introduced the first LCD monitor to the broadcast community. It was voted the editor's "Pick of the Show," and has expanded in all directions, focusing on broadcast television and film.

And our single defining element? To this day it is our dedication to customer service. Though we strive to do a lot of things right...improving on old technologies, offering custom display design, crafting specific models and series for specific uses...it's true that all of these things are important, but nothing matters more than taking care of all of our valuable customers.

As you read through our latest offering, we encourage all of you to take note of what you see and like. If you don't see what you need, all you have to do is let us know and we will build it...

We are here for you, just like when we started out some thirty-five years ago. We are here FOR YOU, and welcome all of your feedback, so that you may allow us to serve you for thirty-five more.

4K

The future is here. And what a beautiful future it portends to be. 4K by Boland is based on clarity, color, and size. Now available in sizes 28", 32", 55", 65", 75", 84", and 98", these models offer Ultra HD resolution of 3840 x 2160, and list features like ultra wide viewing angles, multiple digital inputs, upscale conversion of 1080 signal, Gamma Curve and RGB adjust, safe area markers, and multiple/color temperatures.

If you need to view your 4K content on a color accurate 4K monitor, we would be happy to show you a 4K model by Boland.

OLED

First there was OLED in 17". Great for location and camera work. Then came 25". The perfect size to use as a reference monitor. And now, Boland is proud to bring you the next evolution in OLED technology, the BVB55OLED.

If you have been searching for a client monitor that successfully offers the same black levels now found in your colorist's edit bay (or if you are part of the new wave of color management pros that edit on a large screen format), please consider this brand new 55" model. It tenders all of the extensive features begun on our smaller BVB Series units...but in a larger size. And the black levels attained by its revolutionary OLED technology are second to none.

Television & Broadcast

In the world of Broadcast Television, monitors play a critical role. They provide preview for multiple cameras (and program), assist with camera shading, allow the T.D., A.D., Director, and others to frame a shot, and provide multi-viewing control room options for large productions. They can even monitor signal with built-in scopes.

This is all “good stuff,” but professional broadcast monitors by Boland offer even more. Our high quality, hand selected LCD displays are easy on the eyes after 14 hour days; they offer many signal inputs which give peace of mind that any signal can be processed in any situation; and not only do Boland monitors offer 178° of off-axis viewing, but they do so with perfect, calibrated colorimetry.

From CBS in Los Angeles to CNN in New York to ZDF in Germany, broadcasters worldwide count on Boland for reliability, multi-functioned ease of use, and a second to none range of sizes and options.

Color is Critical! These words, more than any other, describe the Boland models suggested for Post Production. Lots of colorists use lots of different sized monitors. They work in diverse color space, on various types of projects, for different entertainment mediums. Their work is varied. It is unique depending on scope. But there is one criteria important to all: Accurate Color.

To be certain that Color is Correct is a universal demand in the post production community, and Boland offers multiple models to ensure this requisite need is met.

From our BVB25OLED with crisp and conscientious blacks, to our SMPTE 709 47" large screen monitors (used to edit critically acclaimed "House of Cards"), to our portable 17" units that feature 10 bit panels and processing and support DCinema and wide gamuts...for all of these critical elements, Boland is a great candidate for your next Post Production, Color Accurate monitor.

Not sure where to start? Check out our BVB24, BVB25OLED, or BVB17. They all support 4:4:4 signal and present quality that is second to none.

Mobile Broadcast – O.B.

Encore, Game Creek Video, Hudson

Double Eagle, NEP, Pittsburgh

Mobile broadcast is tough. There is no rest for the weary, and often times trucks and vans get no rest at all (and neither does the crew for that matter). Being on the road 24/7/365, a mobile broadcaster demands equipment that can endure thousands and thousands of miles. With respect to monitors, Boland is proud to build models for the best of the best.

If you are building a truck, van or flypack, and need monitors for multi-viewing, shading, or as throw-downs, we would be proud to design some tough and dependable monitors for your specific needs. With the most responsive customer service in the industry, and custom models made to order, Boland will keep you rolling down that highway knowing that monitoring will never be a worry when you come to the end of the line.

Field & Production & On Set

The New Standard...it's as simple as that. In the field, on location in the Blue Ridge Mountains, or sequestered on a stage hidden somewhere in Hollywood, when the shoot is going down, you need accurate, dependable, calibrated monitoring to evaluate the shot and understand what the camera already knows. For almost 20 years, Boland has been an innovator for on-set monitoring. Our professional displays offer a whole host of features not found in other so-called "professional" monitors. For example, many of our models feature 10 bit color depth (1.06 billion colors), full scopes packages, 3G SDI + Dual Link, support for 2K resolution and 4:4:4 signal, and tempered scratch resistant glass.

From Paramount, FOX, Universal, and Sony to the World Series, The Grammy's, The Oscars, and Spiderman number thirty seven, Boland is proud to build reliable and accurate monitors for production.

Check out our new BVB and PVB Series in 17", 24", and 32". All offer 1920x1080 resolution with 2K support, 16 channel audio, and are pre-calibrated at the factory. Or for the discerning eye (and D.I.T cart), perhaps you would be interested in the new BVB25 OLED? Amazing blacks with an amazing price... who could ask for more?

Camera – Jib – Steadicam

Are you following Pacino with a PRO rig? Tracking the shot around the bend at the Indianapolis 500? Maybe filming from a crane for a company like Google or Yahoo? If any of these situations sound familiar, you probably already know about the Boland models that are perfect for steadicam and camera operators, jib and crane principals.

Available with 4:3 or 16:9 aspect LCD's (with LED backlights), in regular brite or DayBrite varieties, and in sizes ranging from 7" to 24", these special monitors from Boland offer up to 1500 nits of brightness, extra wide off-axis viewing, adjustable safe area frame markers, and a whole host of other professional features not often found on other broadcast monitors.

All of these models feature HD SDI, HDMI/DVI, and Composite inputs, as well as SMPTE 709 color calibration, Gamma and Color Temperature onboard adjustments.

Teleprompting

Teleprompter rigs must have one critical characteristic: dependability. When talent has been cued and the director calls for action, the teleprompter operator and his / her equipment must be ready to go. And without a reliable prompting monitor, it's anyone's guess whether the script will be ready to roll.

For almost two decades, Boland has manufactured dependable, high quality teleprompting models with built-in scan reverse, in 4:3 native aspect, in 8", 12", 15", and 19" sizes. DayBrite (1500 nits) or standard brightness...you make the call. Our monitors are used on-set at CNN, for television shows like The View, The Talk, American Idol, and the Bachelor, by multiple international heads-of- state, and by the American President.

DayBrites

You're flying in a chopper in the middle of Vegas, and the camera and the map can't be seen because of the glare.

You're on location in Miami shooting a new crime picture, and the director can't see the action because the monitor itself is 100% clipped by the Florida sunshine.

You're a steadicam operator, and your movie star keeps disappearing from your follow monitor because it's so bright outside.

Sound familiar? We can help. The leading DayBrite monitors in the industry are made by Boland, and we are proud that our DayBrites are used with great satisfaction by folks like steadicam operators Mike McGowan and Brant Fagan, law enforcement agencies like Houston and Phoenix Police Departments, and even multiple Presidents of the United States (reading from the White House Rose Garden).

Mountain Coast Productions, Denver

Exterior Episodic, New Orleans

Our DayBrites are available in a 4:3 aspect, in sizes 8", 10", 12", 15", and 19". They are also available in a 16:9 aspect, in sizes 7", 9", 16", 20", and 23". And all come with just about any signal input and monitor feature you may need.

Not sure exactly which monitor is the best for your use? Please call us any time...we are happy to help...

Digital Signage & Slim Bezel Monitor Walls

They are on-set at The Voice, behind talent on your local evening news, and can be viewed in malls, office buildings, and ballparks throughout the land.

Slim Bezel monitor walls by Boland are certainly slim at 2.5mm.

Available in 46" and 55" sizes, with outstanding 1920x1080 resolution, and with either 450 nts or 700 nts for brightness, these incredible looking LCD's (with LED backlights) can be used inside controlled environments or outside in the sunshine.

And talk about ease of use! Thanks to Boland's onboard software, these models can scale a single image across up to 16 screens without the use of an expensive 3rd party controller/scaler. This means savings!

Aviation – Commercial – Military

Boland Monitors are a perfect fit for airborne applications. Lightweight, with protected screens, Boland commercial-grade units offer flexible input configurations, wide power latitude, and support for all global video formats. Touch screens and LED back lights are available for NVG compatible applications.

Custom Built Monitors

Your needs. Your Specifications.

Built in America, Boland's custom-made models have been featured in such facilities as the Pentagon, the 911 Memorial, and the Smithsonian. Whatever the specifications call for, Boland will deliver exacting standards. Custom color, size, or extra-special technical request? No problem.

Available Options

- "Truck Edition"
(Plain bezel front, buttons on rear)
- Custom Color Bezels
- NVG / Night Vision Compatible LCD's
- Touchscreens up to 72"
- Fiber / SFG signal input
- Standard and DayBrite
- 12 & 28 Volt Power (9-36v)
- Various input configurations

Boland creates custom LCD monitors in America, using only the finest components. Some of our past custom creations are now featured in the 911 Memorial, The Smithsonian, The Museum of Natural History in NYC, Moscone Center, Bank of America, The Pentagon, Disney, and on The Wheel of Fortune.
